

Joomla 1.5.x has reach end of life long time ago but that doesn't mean its not used by thousands of websites around the world.

My experience tells that many of those websites are using buggy Joomla 1.5.xx versions making them vulnerable to attacks and exploits. Thats is why I 've decided to gather all the latest upgrade packages* from Joomla 1.5.22 to 1.5.25 and post them here in order to make them accessible by everybody.

Another serious reason to upgrade into the latest version of Joomla 1.5.25 is making [migration task from 1.5.xx to 1.6.x](#)

a lot easier, that said I urge you to download and upload each package, once at a time, in order to upgrade your Joomla website into the latest 1.5.xx version of 1.5.25.

- [1.5.22 to 1.5.23 upgrade package](#)
- [1.5.23 to 1.5.24 upgrade package](#)
- [1.5.24 to 1.5.25 upgrade package](#)

Upgrade Instructions:

1. Backup your Joomla website and db.
2. Download each upgrade package starting from 1.5.22 to 1.5.23
3. Extract zip file on your pc.
4. Upload all files using an ftp client such us Filezilla.

Follow this procedure for each upgrade package until you reach the last one, when finished log into back end and make sure that latest version is referred in up right position of your tab.

* If you visit [Joomla's official repository page](#) then you won't be able to find those upgrade packages unless you run a specific query about them individually.
